Summary:-

Senior .NET Developer with over 15 years of experience building, enhancing, and supporting enterprise applications using C#, .NET Core, ASP.NET MVC, Web API, SQL Server, JavaScript, and Angular. Experienced in developing secure, scalable solutions, integrating third-party systems, and working across the full software development lifecycle. Strong background in Azure DevOps, Agile development, REST APIs, and database design, with hands-on experience modernizing legacy applications and supporting business-critical systems. Known for collaborating effectively with business users and technical teams to deliver reliable, maintainable solutions across government, logistics, manufacturing, and financial environments.

Core Competencies: Enterprise Application Development • .NET Core • C# • ASP.NET MVC • Angular • RESTful APIs • SQL Server • Azure DevOps • CI/CD • SDLC • Agile/Scrum • Requirements Analysis • Technical Documentation • Production Support • Code Reviews • Secure Coding • Integration Testing • Root Cause Analysis

Key Skills:-

Languages & Frameworks: C#, .NET 4.8 / .NET 6+, ASP.NET MVC, ASP.NET Web API, .NET Core, LINQ, Entity Framework, NHibernate, JavaScript, TypeScript, Angular, HTML5, CSS3, jQuery, SQL

Databases: SQL Server (T-SQL, views, stored procedures, complex SELECT/INSERT/UPDATE statements), Azure SQL, Oracle, Cosmos DB, data migration and integration

Reporting: SSRS, Crystal Reports

APIs & Integration: REST Web APIs, XML, SOAP, JSON, Microsoft Dynamics, Power Platform, Power Portal, integration with internal and third party systems

Platforms & Tools: Git, Azure DevOps (Repos, Pipelines, Boards), TFS, IIS, Azure App Services, Azure App Insights, Service Bus

Testing: Unit Testing, Integration Testing, System Testing, Regression Testing, Test Case Development

Development Practices: Agile and Scrum, sprint-based development, user stories, CI/CD, unit and regression testing, code reviews, secure coding practices (SQL injection and XSS prevention, logging and auditing), documentation, cross team collaboration

Domain Experience: Logistics and transportation, enterprise financial and billing systems, accounts and invoicing workflows, mission-critical line of business applications

Other: PowerShell, VBA, scripting and automation, production support and troubleshooting

Authentication Protocols: OIDC, SAML (familiarity)

Accessibility Considerations: WCAG guidelines, form validation improvements

Professional Experience

Independent Consultant – Lansing, MI

Jul 2024 to Present (remote)

- Designed and developed a custom invoicing and expense tracking application to automate billing, reimbursement, and reporting processes for interpreter services.

- Worked closely with business stakeholders to enhance financial workflows, ensuring accuracy, compliance, and timely delivery of requested features.
- Enhanced the application's user interface by implementing Angular components, form validation, routing, and responsive layouts using TypeScript, HTML, and CSS
- Collaborated with architects and technical leads to design scalable application solutions aligned with business and technical requirements.
- Utilized work items, source control, pull requests, and release activities using Azure DevOps and Git throughout the development lifecycle.
- Automated cross sheet data handling and reporting to reduce manual calculation errors and improve turnaround time for billing and reimbursement.
- Participated in requirement discussions, prepared technical documentation, performed testing, and delivered enhancements through an Agile development process.
- Designed and developed .NET Core C# components to automate invoicing workflows, improving billing accuracy and turnaround time.
- Developed and maintained automated integration tests using Playwright to validate end-to-end application functionality and improve release quality.
- Built secure REST API integrations for data validation and posting, ensuring reliability and error-free transaction processing.
- Participated in requirement gathering sessions with business users to understand functional needs and translate them into technical solutions.
- Implemented document upload and storage features with validation, metadata tracking, and audit logs for compliance.
- Created and optimized T-SQL queries and stored procedures to handle accounts receivable calculations and reporting.
- Created unit and integration test cases to validate application functionality and support stable software releases.
- Participated in code reviews, defect analysis, and root cause investigations to improve application quality and maintainability.
- Managed work via Azure DevOps Boards including sprint tasks, acceptance criteria, and release readiness.
- Identified security gaps and applied secure coding practices such as parameterized queries and role-based access rules.
- Designed and delivered enhancements following Agile/Scrum delivery approach with business stakeholder collaboration.

Magna International – MES Programmer – Lansing, MI
Apr 2024 to Jul 2024 (On-site)

- Enhanced and maintained enterprise manufacturing applications by developing new features, resolving production issues, and improving application performance.

- Expanded .NET Core service components supporting secure data workflows and web system integrations.
- Implemented service components and utilities to support inventory tracking, label printing via ZPL, and automated test frameworks for embedded systems.
- Reviewed business requirements and identified opportunities to simplify application workflows and improve system functionality.
- Supported application deployments across development, QA, UAT, and production environments while coordinating with cross-functional teams.
- Collaborated with business analysts and production teams to analyze requirements, estimate effort, and deliver software enhancements.
- Worked closely with backend developers to integrate Angular applications with .NET Web APIs.
- Refactored mission critical modules, improving system resilience and performance under high transaction volume.
- Managed source code, pull requests, work items, and CI/CD pipelines using Azure DevOps and Git.
- Enhanced .NET Core components to support secure system communication, increasing reliability for high-volume factory workflows.
- Utilized Azure DevOps Boards, Pipelines, and Repos for devops automation, sprint planning, and change control.
- Partnered with business and production teams to translate requirements into maintainable code improvements aligned with quality and safety standards.

**USA Truck – Application Support Specialist III – Van Buren, AR
Jul 2022 to Dec 2023 (remote, on-site for project planning)**

- Supported, enhanced, and maintained enterprise logistics and financial applications while resolving production issues and implementing new business requirements.
- Developed and debugged Microsoft Dynamics and Power Portal solutions used by internal users and external partners for account and shipment related workflows.
- Created and maintained SQL Server queries, views, and stored procedures to support reporting, troubleshooting, and data corrections across financial and operational domains.
- Built PowerShell automation to streamline recurring operational tasks and data checks, reducing manual effort for support staff.
- Participated in all phases of the Software Development Life Cycle (SDLC), including requirements analysis, design, development, testing, deployment, and production support.
- Performed unit, integration, and system testing to ensure software quality and successful production deployments.
- Worked directly with business users to gather requirements, analyze defects, and translate functional needs into technical solutions.
- Enhanced billing, settlement, and accounts receivable workflows using Azure DevOps and secure API development.
- Investigated production issues, performed root cause analysis, and implemented long-term solutions to improve application stability.

- Delivered financial and accounts receivable enhancements supporting billing settlement and compliance with contract terms.
- Improved feature stability by implementing unit test cases and regression validations for code changes in production systems.
- Participated in application design discussions, code reviews, and release planning activities.
- Collaborated with onshore and offshore teams using Scrum ceremonies, story grooming, and effort estimation.
- Integrated solutions with external partners through Web APIs and secure data exchange methods.

**Ryder Systems Inc. – Senior Developer / Senior Application Delivery Analyst – Novi, MI
May 2008 to May 2022 (hybrid)**

- Designed, developed, and maintained enterprise web applications using C#, ASP.NET MVC, .NET Core, SQL Server, and REST APIs for logistics and financial operations.
- Developed secure RESTful APIs with authentication, authorization, validation, and error handling to support enterprise integrations.
- Developed and enhanced Angular-based web pages to support new business requirements and improve the overall user experience.
- Collaborated with business analysts and technical teams to design and implement enterprise application enhancements.
- Performed code reviews and mentored junior developers to ensure coding standards and application quality.
- Designed and implemented reusable software components to improve maintainability and reduce development effort.
- Managed development activities using Azure DevOps, including work item tracking, source control, and release coordination.
- Supported enterprise and government-aligned applications while following established change management, testing, documentation, security, and compliance standards.
- Developed and optimized SQL Server stored procedures, views, and database objects to improve application performance and support business requirements.
- Built and supported document upload modules with security controls, metadata validation, and role-based access.
- Developed unit and integration test suites and improved regression coverage to reduce production defects.
- Participated in application modernization initiatives, migrating legacy systems to cloud-based environments while improving scalability and maintainability.
- Investigated production issues, performed root cause analysis, implemented permanent fixes, and supported application deployments across multiple environments.

Education

Bachelor of Computer Science
University of Windsor – Windsor, Ontario, Canada
