

SAMPLE RESUME

PROFESSIONAL SUMMARY

- API design
- API implementation
- API integration
- Automated CI/CD pipelines
- Cost Analysis
- Collaboration
- Creative thinking
- Database Architecture
- Documentation management
- End-user Consulting
- Enterprise Architecture
- Hardware Troubleshooting
- Internet Administration
- Macromedia Director
- Messaging Architecture
- Knowledge Engineering
- Networking Architecture
- Network Security
- Paired Programming
- Parallelization
- Plug-in Development
- Problem Solving
- Requirements Gathering
- Software Architecture
- Software Development Lifecycle / SDLC
- Software Troubleshooting
- Solutions Architecture
- Systems Administration
- Systems Analysis
- Systems Design
- Technical Consulting
- Technical Writing
- Test-driven Development
- Third Party Integrations
- User education
- Unix scripting languages
- Version control
- Version management
- Web Design
- WebServices

TECHNICAL SUMMARY

- Agile/Scrum
- Angular
- Ansible
- Apache Web Service
- API Development
- Application Lifecycle
- ASP.NET
- Azure App Insights
- Azure Cosmos DB
- Azure Service Bus
- Borland Delphi
- Borland InterBase
- BSD Unix
- C
- C#
- COBOL
- CSS
- Dapper
- Git
- GitHub
- GitLab
- HTML
- JavaScript
- JSON
- Linux
- Lotus Notes
- LUA
- MS Access
- MS Blazor
- MS Dynamics
- MS Entity Framework
- MS IIS
- MS Office 365
- MS PowerShell
- MS SharePoint
- MS SQL Server
- MS Razor
- MS TFS/Azure DevOps
- MS Visual Studio
- MS Windows
- .NET Framework
- NHibernate
- NServiceBus
- Octopus Deploy
- Oracle
- Perl
- PHP
- Python
- ORM
- QNX
- RabbitMQ
- RavenDB
- RBASE
- REST
- SOA
- SOAP
- SQL
- Synergize
- VAX/VMS
- VBScript
- Visual Basic
- WCF
- WebAPI
- XAML
- XML

RELATED EXPERIENCE

Magna International, Lansing, MI
MES Programmer

April 2024 – July 2024

-
- Primarily .NET 4.8 thru 8.0 programming position for in-house development, working on various types of projects: web, desktop, server, communicate with 3rd party systems and Controls, mostly using C#, PowerShell and tSQL, with a minor concentration in machine-specific APIs and Reporting languages.
 - Developed warehouse inventory manager for factory floor use.
 - Modernized and added features to several factory floor applications including frameworks for test mode functionality of embedded production-affecting code, and transition to modern .NET versions of older application

USA Truck, Van Buren, AK

July 2022 – Dec 2023

Application Support Specialist III

- Technology specialist supporting a hybrid IT environment of locally developed code and dozens of third-party MS Windows applications, providing support to both end-users and IT team members through resolution of daily support tickets.
- Learned and assumed SME role over multiple third-party products as attrition reduced the team size
- Supported internal software developers with debugging and deployment automation processes
- Trained team members in troubleshooting techniques
- Developed t-SQL and PowerShell scripts to automate and streamline problem-solving processes
- Developed web and native APIs for the exchange of data between unconnected systems, as well as integration between systems not sufficiently connected
- Provided my manager with the opportunity to actually take vacation time instead of working without a break

Ryder Systems Inc., Novi, MI

May 2008 – May 2022

Senior Application Delivery & Support Analyst/ Subject Matter Expert LMS

July 2020 – May 2022

- Organization redistribution and title update to better reflect day-to-day activities, all functionality as a Site Reliability Analyst still applies.
- Management and fulfilment of daily support ticket requests from both internal and external tickets, as well as rerouting tickets to their proper departments when the response we could provide was not sufficient
- Finishing a migration of our hosting environment from a dedicated data center to Azure Cloud Services, along with incremental changes to take advantage of the new environment, including moving static data from MS SQL Server to Azure Cosmos DB, application logging from the filesystem to Azure Application Insights, and software deployment from self-hosted Octopus Deploy and Team Foundation Server, to the Octopus cloud offering and Azure DevOps Services using Git repositories.
- Liaised with customer efforts for IT migration, including General Motors efforts to use Freight Verify as their Geolocation provider, and the transition of many Ryder Citizen Developer applications to more structured IT managed solutions.
- Mentored fresh developers and QAs to the LMS product, including managing the development cycle by performing coding and testing reviews, regression validation, and enforcing the process of the Agile release cycle.

Site Reliability Analyst / Subject Matter Expert LMS

September 2017 – July 2020

- Support and maintenance of the system in the below work experience section, with an emphasis on both preventative maintenance and customer support, but also including the nonproduction systems used by internal resources.
-

-
- Development skills were often used both in researching the source of problems, as well as helping with design and guidance for the development team.
 - 24/7 on-call duties for one third to one half of the month (depending on staffing) include response to emergent situations, monitoring of systems as needed, and early morning and late-night deployments of new versions of the product while the user demand is minimal; the product serves customers continuously
 - As SME, pivotal in the design of new implementation of environments, including Disaster Recovery design and testing, and current projects involving migration to cloud services for hosting of both the end-user product and our source code environment.

Senior Developer

May 2008 – September 2017

- Development, design, and maintenance of an internal Logistics Management System (LMS) written primarily in C# for an ASP.NET environment, incorporating multiple JavaScript frameworks and development paradigms. The product focus is on the Automotive vertical, but services accounts as needed in the Supply Chain Solutions portion of the business.
- Duties encompassed the developed software system as a whole, as well as maintaining source control and Agile processes flow (using Team Foundation Server), system configuration and architecture, internal information systems via DokuWiki, recommendation and implementation of third-party developer tools, and supervision and mentoring of our internal Quality Assurance testing staff.
- Notable projects responsible for including:
 - The creation of a WCFService to interface to a COM server from ALK's PC Miler to allow retrieval of distance information per contractual requirements for expedited loads the upgrade, in one jump of our NHibernate data persistence layer from version 1.2.1 (released November 2007) to version 4.0.5 (released August 2015)
 - All Team Foundation Server and Visual Studio from 2005 through 2015
 - The conversion of the team information storage wiki from a proprietary environment to the open source DokuWiki
 - Creation and maintenance of secure WebAPIs for custom data transfer
- In addition, provided a 'Software Factory' to other divisions at Ryder, and have delivered both the software configuration and installation of a new generation of the LMS servers that incorporated disaster recovery services, as well as a system written in T-SQL that provides a framework for scheduled database table data conversion to XML files to allow data transfer between Ryder's third party warehousing solution powered by Manhattan SCALE, and another Logistics system used at Ryder called Ryder Online.

Analysts International, Lansing, MI

March 2006 – April 2008

Software Developer

- In-House development for computer consulting agency.
- Designed and developed various integration systems to allow third party software packages to share data, using low level socket programming in C on both Unix and Windows platforms.
- Maintained software, provided technical support to fellow developers.

EDS, Lansing, MI

August 2005 – March 2006

Systems Engineer

- Maintenance and improvement of proprietary system to manage various state Medicaid programs.
-

-
- Fast-based, wide-ranging assignments, performed in a team environment with both local and remote team members.
 - Mentoring of junior programmers.
 - Help desk and system configuration assistance to team members when required.

Teksystems, Detroit, MI

March 2004 – June 2005

Systems Analyst/Programmer

- Term contract designing and implementing operating systems upgrade for an information and service organization for an association of businesses involved in the municipal bond industry, which gathers, retains, and reports information about Michigan municipal bonds as a service to its members.
- The upgrade included new software modules for the database-driven website that is the front line for providing this information.

ClientLogic, Las Vegas, NV

July 2001 – March 2004

Technical Support Specialist

- Started as inbound telephone technical support for a nationwide ISP across multiple platforms, including Windows and MacOS.
- Transferred for merit to the Desktops unit of a national mail-order manufacturer of Wintel system, and later trained for portables support certification as well.

SimpleSearch.com, Las Vegas, NV

February 2000 – May 2001

Systems Analyst

- Specification and analysis of revenue streams, integration of live website with internal software packages, mentoring of programmers, programming support of HTML designers, conversion of software from one Unix platform to another, programming in C++, JavaScript, Perl, and csh and bash scripting languages.

Hallmark Technologies, Inc., Windsor, ON

October 1997 – September 1999

Applications Programmer

- Designed, developed and supported a multi-user manufacturing job process tracking package from specifications and onsite investigation, which wrote in Visual Basic and SQL as an independent contractor for this firm.
- Debugged and rewrote data translation programs in C and Unix shell script.
- Created a prototype corporate website. Assisted with systems administration of a composite Windows 95-NT/ Irix / HP-ux CAD-CAM network.

EDUCATION

Bachelor's Degree: Bachelor of Computer Science
University of Windsor, Windsor, Ontario
